Analysis of Cancer Waiting Times treatment data including information on
palliative care

Analysis of Cancer Wait Times (CWT) treatment data for 2010

This reports looks at the Cancer Wait Times data for 2010 by treatment group. This includes all people diagnosed with a primary malignant Brain tumour in 2010 and splitting these patients by the treatments they have received. The main data is produced on the main Neuroscience centres listed below. The list of Neuroscience centres is based on the main referral centres for Brain and CNS tumours throughout the country.

As this data is produced on Cancer Waiting Times data we are not responsible for the accuracy of the data. The percentages shown are only what the individual Trusts have entered. The actual number of treatments may be higher.

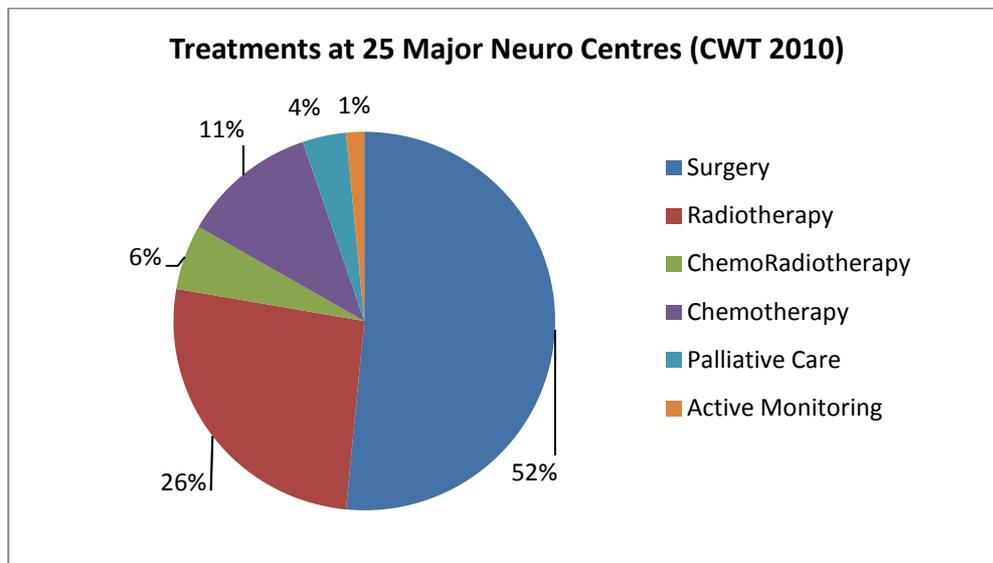

Neuroscience centres analysed

Hospital name
Frenchay Hospital
Wessex Neurological Centre
Essex Neurological Centre
Hope Hospital
Christie NHS FT
Walton Centre for Neurology & Neurosurgery
Queen's Medical Centre
Hull Royal Infirmary
The National Hospital for Neurology & Neurosurgery
Great Ormond Street Hospital for Children
Royal Hallamshire Hospital
St George Hospital
Addenbrooke's Hospital
The General Infirmary at Leeds
Royal Free Hospital
James Cook University Hospital
Newcastle General Hospital
Queen Elizabeth Neuroscience centre
Birmingham Children's Hospital
Derriford Hospital
King's College Hospital
John Radcliffe Hospital
Charing Cross
Royal London Hospital
Hurstwood Park Neurological Centre

Patients diagnosed in 2010 with a brain tumour shown by their treatment group

Patients may appear in more than one treatment group, therefore if the patient had surgery and chemotherapy they would be counted in both figures.

Major Neuro Centre Analysis (CWT 2010)			
	Total Treatments	4084	%
	Surgery	2105	52%
	Radiotherapy	1069	26%
	ChemoRadiotherapy	227	6%
	Chemotherapy	470	12%
	Palliative Care	150	4%
	Active Monitoring	63	2%

When looking at all CWT returns (all Trusts in the country) and not just the main Neuro centres listed above the palliative care results increase to 5%
